

Smart Farming For Healthy Bees —— BEE FRIENDLY LAND MANAGEMENT ——

REGION - WAIKATO AND BAY OF PLENTY October 2009

loney bee on Macadamia (Macadamia spp.)

STRONG AND HEALTHY BEES ARE A CRITICAL PART OF PROFITABLE AGRICULTURE To ensure the future of farming, all farmers need to play their part in protecting the honey bee. The bee is one of the hardest workers in horticulture and agriculture; about \$3 billion of our GDP is directly attributable to the intensive pollination of horticultural and specialty agricultural crops by bees. In addition there is a huge indirect contribution through the pollination of clover, sown as a nitrogen regeneration source for the land we farm. This benefit flows on to our meat export industry through livestock production and sales.

The beekeeping industry is facing some of its biggest challenges with increasing bee pests and diseases. This is of great concern because, in terms of the food we eat, about a third of the calories and three-quarters of the diversity rely on bees for pollination.

The most important issue leading to a bee crisis in NZ is declining floral resources and the subsequent scarcity of quality pollen, which leads to bee malnutrition. The key to good bee health is a continual supply of diverse pollen and nectar from natural sources.

Bees consume pollen as a protein and vitamin source and nectar for energy. While gathering these resources, they move pollen from one plant to another thus benefiting the farm by pollinating crops. Availability of quality pollen resources is critical during spring when beekeepers are building up bee populations for pollination services. Any shortfall leads to protein stress that weakens bees making them more susceptible to diseases and pests (e.g., varroa mite); it also dramatically slows the queens breeding output and this results in low field strength and under-performing pollination services.

Today, farmers can reverse this trend by choosing bee friendly trees and shrubs for planting in waterway margins, windbreaks, field edges, under pivots and along roadsides. Fortunately a number of shelter and erosion control plants have abundant flowers to feed bees so selecting multi-purpose plants is smart farming for healthy bees.

This fact sheet will help you provide pollen that these vital creatures need. To find out where to source the plants on this list please go to www. plantfinder.co.nz or ask at your local nursery.

Native Trees and Shrubs for Bees

Native plants are the best choice to increase "on-farm" native biodiversity and benefit both the honey bee and the environment.

Akepiro (Olearia furfuracea) --- Tree/Shrub, 5m, Oct-Jan

Black maire (Nestegis cunninghamii) --- Tree, 20m, Oct-Nov

Cabbage tree (Cordyline australis) --- Tree, 15m, Oct-Dec

Five-finger (Pseudopanax arboreus) --- Tree, 8m, Jun-Aug

Giant speargrass (Aciphylla colensoi) --- Tufted, 1m

Haekaro (Pittosporum umbellatum) --- Tree, 7m, Sep-Jan

Hangehange (Geniostoma rupestre var. ligustrifolium) --- Shrub, 3m, Sep-Nov

Heketara (Olearia rani) --- Tree/Shrub, 7m, Aug-Nov

Hinau (Elaeocarpus dentatus) --- Tree, 15m, Oct-Feb

Horoeka (Pseudopanax crassifolius) --- Tree, 15m, Jan-Apr

Kāmahi (Weinmannia racemosa) --- Tree, 20m, Dec-Jan

Kānuka (Kunzea ericoides) --- Tree/Shrub, 15m, Sep-Feb

Karapapa (Alseuosmia macrophylla) --- Shrub, 2m, Aug-Dec

Kohuhu (Pittosporum tenuifolium) --- Tree, 6m, Oct-Nov

Kormiko (Hebe stricta) --- Shrub, 4m

Kumarahou (Pomaderris kumeraho) --- Shrub, 3m, Sep-Oct

Lacebark (Hoheria populnea) --- Tree, 10m, Mar-Apr-(Jun)

Lemonwood (Pittosporum eugenioides) --- Tree, 10m, Oct-Dec

Manuka (Leptospermum scoparium) --- Tree/Shrub, 5m, Sep-Mar

Mingimingi (Leucopogon fasciculatus) --- Shrub, 5m, Sep-Nov

Ngaio (Myoporum laetum) --- Tree/Shrub, 10m, Jul-Apr

North Island broom (Carmichaelia australis) --- Shrub, 2m, Oct-Feb

NZ flax (Phormium tenax) --- Tufted, up to 5m flw stalk, Nov-Dec

Pohutukawa (Metrosideros excelsa) --- Tree, 20m, Dec-Jan

Pokaka (Elaeocarpus hookerianus) --- Tree, 8m, Oct-Jan

Ramarama (Lophomyrtus bullata) --- Tree/Shrub, 6m, Nov-Feb

Rangiora (Brachyglottis repanda) --- Tree/Shrub, 6m, Aug-Oct

Rata (Metrosideros robusta) --- Tree, 25m, Nov-Jan

Raukawa (Raukaua edgerleyi) --- Tree, 10m, Nov-Mar

Rewarewa (Knightia excelsa) --- Tree, 30m, Oct-Dec

Seven-finger (Schefflera digitata) --- Tree, 8m, Feb-Mar

Tawhero (Weinmannia silvicola) --- Tree, 15m, Sep-Dec

Tree fuchsia (Fuchsia excorticata) --- Tree/Shrub, 12m, Jun-Jan Weeping matipo (Myrsine divaricata) --- Shrub, 3m, Jun-Nov

Non-native Trees and Shrubs for Bees

Exotic plants are good choices because many are multi-purpose for farming and have excellent pollen and nectar.

Pear (Pyrus communis) --- Tree, Sep-Oct

Rosemary (Rosmarinus officinalis) --- Shrub, 1.5m, Sep-Nov

Tree lucerne (Chamaecytisus palmensis) --- Tree, 5m, May-Oct

Weeping willow (Salix babylonica) --- Tree, 25m, Aug-Sep

Blue gum (Eucalyptus globulus) --- Tree, 40m, Aug-Nov

Red-flowering gum (Corymbia ficifolia) --- Tree, 10m, Dec-Feb

Silver dollar gum (Eucalyptus cinerea) --- Tree, 15m, Dec-Feb

White ironbark (Eucalyptus leucoxylon) --- Tree, 30m, Mar-Nov

To match plants to your site, consult a plant adviser, e.g. Cambridge Forest & Native Nursery Ph: 07 827 4105, sales@treenursery.co.nz

The plants listed above are examples of good Bee Plants that are not on any list of pest plants (weeds) for Waikato and Bay of Plenty. See our website for further examples and guidelines. Although some plants are good for bees they are on pest plant lists because they are invasive. Planting them would be detrimental to farmers or to the environment and in some cases even illegal (e.g., Unwanted Organisms list). Lists of pest plants change regularly so it is best to consult your regional authorities.

1 Regional Pest Management Strategies are at http://www.biosecurityperformance.maf.govt.nz/

Plants listed in the strategy must not be planted for various reasons. For advice in your area, contact Waikato Regional Council Ph: 0800 800 401; Email: info@ew.govt.nz or see www.ew.govt.nz, or Bay of Plenty Regional Council Ph: 0800

368 267, info@envbop.govt.nz, www.envbop.govt.nz.

For example do not plant:

Barberry (Berberis darwinii) ---Shrub

Blackberry (Rubus fruticosus) --- Shrub Buddleja (Buddleja davidii) --- Shrub

Gorse (Ulex europaeus) --- Shrub

Himalayan honeysuckle (Leycesteria formosa) ---Shrub

Privet (Ligustrum sinense) -- Shrub

Scotch broom (Cytisus scoparius) --- Shrub

The National Pest Plant Accord (NPPA) is listed at www.biosecurity.govt.nz/nppa.

Plants listed on the NPPA are unwanted organisms under the Biosecurity Act 1993 and cannot be sold, propagated or distributed even though some are high value bee plants.

For example do not plant:

Crack willow (Salix fragilis) --- Tree

Grey willow (Salix cinerea) --- Tree/Shrub

Lantana (Lantana camara) --- Shrub

Scottish heather (Calluna vulgaris) --- Shrub

The Department of Conservation (DOC) Weed List contains around 20 high value bee plants that are aggressive environmental weeds. To protect the environment, consult DOC weed experts www.doc.govt.nz/conservation/threats-and-mpacts/weeds/docs-weed-work/

Thanks to the New Zealand Charitable Honey Industry Trust for funding. This list was produced from Landcare Research databases http://nzflora.landcareresearch.co.nz/ with support from the Oceania Pollinator Initiative www.oceaniapollinator.org. For other regional Bee Plant Guides and how to use them see Federated Farmers website www.fedfarm.org.nz/ourcampaigns or contact Shona Sluys at ssluys@fedfarm.org.nz or Linda Newstrom-Lloyd at newstroml@landcareresearch.co.nz
